Quotation for Secure Cloud Document Management System

Quotation No.: LOGESH/2026/CDM/001
Date: August 2026

Prepared for:
CS. T. Saraswathi, B.Com., FCS
Practising Company Secretary

Head Office:
No. 5, Manickam Nagar 1st Cross Street,
New Ramnad Road,
Madurai — 625009

Branch Office:
Tulip Block No. 8604, Embassy Residency,
Perumbakkam,
Chennai — 600100

Prepared by:
Logesh P S

Note: The undersigned is a freelance professional and is not registered under GST.

---

1. Executive Summary

This quotation covers the design, deployment, migration and go-live of a **Secure Cloud Document Management System** for your firm, hosted on Amazon Web Services (AWS) in the Mumbai region, running Nextcloud open-source enterprise document platform.

Scope covers:

- **10 user accounts** (5 permanent + 5 rotating trainees).
- **150 GB of firm data** migrated from existing hard drives to secure cloud storage.
- **Web + Desktop + Mobile access** for all users.
- **Full audit trail** of every user action for compliance.
- **3-layer backup** (Trash bin + Version history + AWS Glacier archive).
- **India-resident data storage** (AWS ap-south-1, Mumbai).

Commercial structure:

- **One-time professional services fee (paid to Logesh P S):** ₹40,000
- **One-time domain registration (paid to registrar):** approx. ₹1,000
- **Recurring monthly AWS infrastructure cost (paid directly to AWS India):** approx. ₹5,000/month with 1-year Reserved Instance (recommended, no upfront payment).

---

2. Glossary — Technology Terms Used in This Document

Since some technology terms are unavoidable in a cloud project, a short glossary is included so the commercial sections are easy to read.

Term	Meaning in plain language
Cloud	Storing files and running software on secure remote servers over the internet, instead of on physical hard drives in your office.

Term	Meaning in plain language
AWS (Amazon Web Services)	The world's largest cloud infrastructure provider. Your data will physically sit in Amazon's Mumbai data centre.
Nextcloud	A well-established open-source software that turns cloud storage into a private "Google Drive" or "Dropbox" for your firm — with editing, sharing, chat, and audit built in.
Server (EC2)	A powerful computer running 24×7 that hosts your Nextcloud portal. Since this runs continuously, it is the largest monthly cost line (see Note 1 in Section 5).
Storage (S3)	Where your files physically reside. Very cheap per GB.
Database (RDS / MySQL)	A small structured record of who has access to what file and what happened when. Files themselves are stored separately.
Domain / URL	Your firm's web address (e.g. files.yourfirm.co.in).
HTTPS / TLS	The "lock symbol" in your browser — meaning all data traveling between users and server is encrypted.
Encryption at rest	Files are stored in scrambled form on the server. Even if someone stole the drive, they couldn't read the data.
Backup	Additional safely-stored copies of data used for recovery in case of accidental deletion.
Reserved Instance (RI)	An optional 1-year commitment to Amazon in exchange for a ~30 % discount on the server cost.
Bandwidth / Data Transfer Out	Amount of data that leaves the cloud (i.e. downloads by users). Uploads into the cloud are always free.

3. Solution Overview

Component	What it does
Nextcloud (open-source, free)	Provides the entire user interface, sharing, editing, audit log, backup, and admin capabilities. See the accompanying Feature Document for the detailed list of 130+ capabilities.
AWS EC2	Cloud server that runs Nextcloud 24×7.
AWS S3	Secure cloud storage that holds all 150 GB of firm data.
AWS RDS (MySQL)	Managed database for Nextcloud's internal records, automatically backed up.
AWS Route 53	Domain-name management for https://files.yourfirm.co.in.
AWS CloudTrail + Backup	Independent audit log + automated daily backups.

Deployment region: AWS Mumbai (ap-south-1) — data stays inside India.

---

4. Scope of Work — One-Time Deliverables

#	Deliverable	Description
1	Cloud architecture design	End-to-end architecture diagram tailored to the firm's requirements, delivered as a documented PDF.
2	AWS environment provisioning	Setup of the AWS account, private network, encryption keys, server, storage, database, DNS and billing alerts in a new AWS account under the firm's ownership.
3	Nextcloud installation & hardening	Ubuntu 24.04 LTS server + Nginx + PHP-FPM + Nextcloud latest LTS + Redis caching + firewall .
4	HTTPS with custom domain	Configuration of files.yourfirm.co.in with TLS encryption via Let's Encrypt (auto-renewing).

#	Deliverable	Description
5	Nextcloud Office (Collabora)	Browser-based Word / Excel / PowerPoint editing engine installed and integrated.
6	Additional apps enabled	Nextcloud Talk (chat + video), Groupware (Calendar + Contacts), Deck (Kanban board), Time Manager, LibreSign (PDF signing).
7	Data migration	Migration of 150 GB of existing firm data from source hard drives to AWS with folder structure preserved and integrity verified via checksum comparison.
8	User & permission model	Creation of 10 user accounts with role-based access (Partners / Seniors / Juniors / Trainees) per client-supplied matrix.
9	Audit log configuration	Nextcloud Activity log + AWS CloudTrail + storage access logging configured for indefinite retention and CSV export.
10	Backup & disaster recovery	Daily server + database snapshots, storage versioning, Glacier long-term backup, and a written disaster-recovery procedure.
11	User acceptance testing (UAT)	Guided walk-through with partners and staff; issue log and fixes.
12	Training sessions	Two sessions of 90 minutes each — one for firm administrators, one for all end-users.
13	Documentation	Admin Runbook, User Quick-Start Guide, Backup & Restore Procedure, AWS Account Architecture Diagram.
14	Ongoing post-go-live support	Endless support for any issue arising from the delivered scope (see Section 12).

---

5. One-Time Costs

5.1 Professional Services Fee (payable to Logesh PS)

Line Item	Amount (INR)
Cloud architecture design & documentation	4,500
AWS environment provisioning & hardening	7,000
Nextcloud setup on server, Office integration & app setup	6,500
Data migration of 150 GB with integrity verification	4,500
User accounts & role-based permission model	2,500
Audit log & three-tier backup configuration	4,500
User acceptance testing, training (2 sessions) & complete documentation	6,500
Ongoing post-go-live support & knowledge transfer	4,000
Subtotal — Professional Services	**40,000**

Freelance professional services. GST not applicable.

5.2 Third-Party One-Time Costs (paid by client directly)

Line Item	Vendor	Approx. Amount (INR)
Domain name registration yourfirm.co.in (annual)	Registrar of choice (BigRock / GoDaddy / Namecheap)	~1,000
Nextcloud software licence	Open-source (Nextcloud GmbH)	0
Nextcloud Office (Collabora Community Edition)	Open-source	0
Migration tools (AWS CLI, etc.)	Open-source	0
Subtotal — Third-Party One-Time		**~1,000**

5.3 One-Time Grand Total

Professional services fee (to Logesh PS)	40,000
Third-party — domain (to registrar)	1,000
One-Time Grand Total	**~41,000**

---

6. Recurring Monthly Costs (Paid Directly to AWS India)

The recurring cost is entirely for AWS cloud infrastructure. AWS India Pvt. Ltd. issues a proper GST invoice directly to the firm each month. The client's credit card / net-banking is charged automatically by AWS. Logesh PS does not receive any part of this payment.

6.1 Detailed Line Items — On-Demand Pricing

Item	Purpose	Approx. Monthly (INR)
EC2 t3.medium server (running 24×7)	Nextcloud application server	2,800
Server disk (30 GB)	Operating system storage	250
Database (RDS MySQL)	Nextcloud's internal records	1,050
Database storage (20 GB)	Data + logs	230
Cloud storage (S3, 150 GB)	All firm files	320
Storage versioning (est. 20 GB)	Past versions of edited files	45
Storage request charges (typical usage)	Standard read/write operations	60
Bandwidth out (est. 50 GB/month)	User downloads & mobile sync	450
DNS (Route 53)	For files.yourfirm.co.in	45
Automated backups (server + database daily snapshots)	Disaster recovery	200
Audit log storage (CloudTrail)	Independent AWS audit trail	100
System monitoring (CloudWatch)	Server health & alarms	100
Glacier Deep Archive (long-term backup)	5–10 year compliance archive	45

Item	Purpose	Approx. Monthly (INR)
Buffer / contingency (~10 %)	For usage spikes	500
Approximate monthly total — On-Demand		**≈ ₹6,200**

6.2 Notes on the Above Cost Structure

Note 1 — Why is the server (EC2) larger than the storage cost?
Cloud pricing works differently from personal storage. The server (`EC2`) is a computer that runs 24×7 to host the Nextcloud portal — this is a **fixed cost** regardless of how many files are stored. Storage (`S3`) is charged **per gigabyte** and scales with the volume of data. Because you currently have 150 GB, the storage line is small. As data grows to 1 TB or 2 TB in future years, the storage line will grow proportionally while the server line stays roughly the same. This is standard cloud economics.

Note 2 — Uploading files is free; only downloading is charged.

- **Uploading files to AWS is completely free** — you can upload as many files as you want, at any speed, without incurring bandwidth charges. This is guaranteed by Amazon for every account.
- **Only "download" traffic (data leaving the cloud) is billed** — this happens when a user clicks "Download", when the desktop sync client copies files to a laptop, or when the mobile app fetches a file.
- **Editing in the browser (Nextcloud Office / Collabora) does not download the file** — the file stays on the server; only your edit clicks travel between your browser and the server, which is a few kilobytes. Even heavy editing sessions use very little bandwidth.

- The 50 GB/month estimate accounts for realistic daily downloads. Actual usage will vary. If it goes higher, the buffer (~₹500) absorbs it.

6.3 Reserved-Instance Pricing (Recommended after 30 days settling-in)

Once the environment is stable (typically after 30 days), the firm can purchase **1-year Reserved Instances (RI)** for the server (EC2) and database (RDS). Reserved Instances are a 1-year commitment to Amazon in exchange for approximately **30 % discount** on those two lines.

Item	On-Demand	1-Year RI	Monthly Saving
EC2 (server)	2,800	1,800	1,000
RDS (database)	1,050	720	330
All other lines	2,350	2,350	0
Effective monthly total	**₹6,200**	**≈ ₹5,000**	**₹1,000/month**

Reserved-Instance annual saving: approx. ₹12,000/year.

Reserved Instances can be purchased directly from the AWS Console after go-live, once the firm is comfortable that the setup is stable.

---

7. Detailed Month-by-Month Cost Breakdown

For clarity, here is exactly what the firm will pay each month.

7.1 First Month (Setup Month)

Item	Paid To	Amount (INR)
Professional services — 20 % advance	Logesh PS	8,000
Professional services — Data migration milestone	Logesh PS	16,000
Professional services — Go-live milestone	Logesh PS	16,000
Domain registration (annual)	Registrar	1,000
AWS infrastructure (first month, on-demand, pro-rated)	AWS India	~6,200
Month 1 total outlay		**≈ ₹47,200**

7.2 Second Month Onwards (Steady State — On-Demand Pricing)

Item	Paid To	Amount (INR)
AWS infrastructure (monthly)	AWS India	~6,200
Month 2+ total outlay		**≈ ₹6,200/month**

7.3 Second Month Onwards (If Reserved Instances Purchased After Month 1)

Item	Paid To	Amount (INR)
AWS infrastructure with 1-year RI	AWS India	~5,000
Month 2+ total outlay		**≈ ₹5,000/month**

7.4 Month 12 / Every Year Renewal

Item	Paid To	Amount (INR)
Domain renewal (annual)	Registrar	~1,000
AWS infrastructure (that month)	AWS India	~5,000 – ~6,200
Month 12 total outlay		**≈ ₹6,000 – ₹7,200**

7.6 Cost Growth Forecast

As the firm's data or team grows, the AWS bill grows proportionally with storage. **User count does NOT affect infrastructure cost.**

Total data	Users	Estimated monthly AWS cost
150 GB (today)	10	₹5,000 – ₹6,200
300 GB	10	₹5,400 – ₹6,400
500 GB	15	₹5,700 – ₹6,700
1 TB	20	₹6,600 – ₹7,600
2 TB	25	₹8,700 – ₹9,700

Adding new users is free on the AWS side.

---

8. Payment Terms & Milestones

8.1 Professional Services Payment Schedule

Milestone	Trigger	Amount
Advance	Signing of this quotation	8,000
Data migration complete	Verification of 150 GB successfully migrated to AWS	₹16,000
Go-live + training complete	Training sessions delivered & documentation handed over	₹16,000

8.2 Third-Party Payments (Direct)

Item	Trigger	Amount
Domain registration	Day 1 of engagement	~₹1,000 (paid directly to registrar)
AWS infrastructure	Monthly	Billed directly by AWS India to the firm's registered payment method

---

9. Project Timeline — 20 Working Days to Go-Live

Phase	Days	Cumulative
Pre-work — client provides user list, permission matrix, AWS access authorisation	Days 1 – 3	Day 3
Phase 1 — Foundation (domain purchase, AWS account, private network, security keys)	Days 4 – 5	Day 5
Phase 2 — Nextcloud server installation & hardening	Days 6 – 7	Day 7
Phase 3 — Nextcloud Office + Talk + Groupware + Deck apps enabled	Day 8	Day 8
Phase 4 — User accounts + group + permission matrix + audit log	Days 9 – 10	Day 10
Phase 5 — Data migration (150 GB — spread across 3–5 overnight upload windows depending on office bandwidth)	Days 11 – 15	Day 15
Phase 6 — Integrity verification, backup jobs, monitoring, alarms	Days 16 – 17	Day 17
Phase 7 — User acceptance testing with partners & staff	Day 18	Day 18

Phase	Days	Cumulative
Phase 8 — Training sessions (admin + end-user)	Day 19	Day 19
Phase 9 — Go-live, documentation hand-over, credential rollover	Day 20	Day 20

Overall commitment: go-live within 20 working days of signed proposal + receipt of advance + client-side inputs.

The 20-day plan builds in a realistic buffer for client-side turnaround (user list, permission matrix, credentials), overnight upload windows, and any small fixes discovered during testing. This is an achievable, honest timeline.

---

10. Assumptions & Prerequisites

The following are assumed for the delivery to remain within the stated timeline and cost:

1. Client and Logesh PS shall open an AWS account in the firm's name and provide authorised access to Logesh PS for setup.
2. Client shall provide the list of users (name + role + assigned client folders) within 2 working days of engagement start.
3. Client shall provide upload access to the source data (150 GB) — either via the office PC that currently holds it or via an external hard disk.
4. Client's office internet has a minimum upload bandwidth of 20 Mbps for the overnight migration; higher speeds shorten the migration window.
5. Firm has decided on a domain name to register.
6. Client will make available 3–5 users for User Acceptance Testing on Day 18 and all users for training on Day 19.

---

11. Exclusions

The following are **not** included in this quotation:

- Purchase of the domain name (approx. ₹1,000/year — paid directly to registrar).
- Ongoing AWS infrastructure charges (pass-through — paid directly to AWS India).

---

12. Ongoing Post-Go-Live Support

Once the system is live, Logesh PS provides **ongoing support without any fixed time limit** for any issue arising from the delivered scope. This includes:

- Answering questions from any user or administrator.
- Resolving any defects or configuration issues in the delivered setup.
- Guidance on adding new users, changing folder permissions, restoring deleted files, and running audit-log reports.
- Guidance on browser, desktop-sync, or mobile-app usage.
- Investigating and helping with any error or unexpected behaviour.

Support channel: email + phone (WhatsApp acceptable).

Response commitment: best effort — typically same day for critical issues, within 1–2 working days for routine queries.

What is NOT covered under ongoing support

- **New features / new modules** — anything beyond what is delivered in Section 4 above (for example, adding an HR system, integrating a new third-party tool, enabling additional Nextcloud apps beyond the mentioned scope, custom development, or

integration with the firm's existing accounting/tally software). These will be quoted separately at the time of request.
- **Additional data migration** — moving data from new sources beyond the initial 150 GB.
- **Major architectural changes** — e.g. moving from single-server to multi-server setup, disaster-recovery site in another region, dedicated video-call backend.
- **Third-party costs** — AWS bill, domain renewal, or any external subscription.

Additional-feature requests will be scoped separately, with an agreed fee before work begins.

---

13. Confidentiality

- All firm data, client information, and business processes shared during the engagement will be treated as strictly confidential.
- A separate non-disclosure agreement (NDA) may be signed at the client's request at no additional cost.
- No firm data will be retained by Logesh PS after project completion — all access credentials handed over and personal copies destroyed.

---

14. Terms & Conditions

1. This quotation is valid for **30 days** from the date of issue.
2. AWS infrastructure charges are pass-through: Logesh PS does not charge any margin on them; the AWS invoice is raised by AWS India Pvt. Ltd. directly to the firm.
3. Any change in scope (additional users, folders, apps, or data volume beyond 150 GB) will be quoted separately.
4. The firm remains the sole owner of the AWS account, cloud storage bucket, data, and domain at all times.

---

15. Grand-Total Summary Card

> **One-time professional services fee (payable to Logesh PS):** ₹40,000
> **One-time domain registration (paid to registrar):** ~₹1,000
> **Recurring monthly AWS infrastructure (paid directly to AWS India):** ~₹5,000 – ₹6,200
>
> **Month 1 total outlay:** ~₹47,200 *(one-time fee + domain + first month AWS)*
> **Month 2 onwards:** ~₹6,200/month *(on-demand)* or ~₹5,000/month *(with 1-year Reserved Instance)*
> **User count changes:** ₹0 additional cost on infrastructure.
> **Trainee rotation:** ₹0 additional cost.
> **Ongoing support:** included, no time limit, for the delivered scope.

Document prepared by Logesh PS. For any clarifications, please reach out at any time.
